

Framing a Mirror

Turn your unframed, lifeless mirrors into a centerpiece in 30 minutes with prefinished, lightweight moulding.

1 **Materials you'll need:**

- Moulding of your choice (in this project we used Base 632 Espresso on a 30"x40" mirror)
- 1.5" finishing nails
- Contractor's adhesive
- Color-matched painter's putty

First, choose the moulding that works best for the size of mirror you'll be framing. A large mirror might look best with a wide-base moulding, while a smaller mirror might be best with a casing material. Choose a color that works well with your room and provides a nice accent to the mirror.

Get enough moulding material to ensure you have full pieces for each length you'll need for the mirror.

2 **Measure:**

- Measure the outside dimensions of the mirror carefully and miter-cut the moulding to fit exactly.

3 **Assemble:**

- Glue the pieces, place them around the mirror and tack them with finishing nails.
- Carefully fill the nail holes and mitered corners with a little color-matched painter's putty and you're done!

4 **Success!**

Once you complete your first project, you just might be inspired to frame all the other mirrors in your house. Or make a frame on a wall and paint the inside with chalkboard paint for a fun creative wall. And with so many options for styles and colors, you'll love the results.
